

Home monitoring for Heart Failure Management

Reduces visits to the emergency and hospital admissions

Why refer a patient to telemedicine CHF home monitoring?

- Helps the patients live their best possible life.
- Complements the care provided by the patient's primary care provider.
- Provides regular reports on your patient's status.
- Provides warning of potential worsening of the condition.
- Reduces visits to the emergency and hospital admissions.

Home Monitoring for Heart Failure

- Prevent exacerbation through early warning.
- Patient confidence and peace of mind increases as self-management skills are learned.
- Support helps patients retain independence and remain in their own homes.

How it Works

Home monitoring service supports patients with Heart Failure through health coaching and remote monitoring. The service is free to patients.

1. A primary care provider refers a patient to the telemedicine department.
2. The telemedicine nurse will meet patient at the telemedicine studio to teach CHF and install home monitoring equipment.
3. Patients use home-based technology to measure blood pressure, weight, and to answer simple questions about how they are feeling.
4. Specially-trained registered nurses monitor daily vital signs and provide weekly health coaching by telephone.

How to refer a patient?

- ◆ Fill out the reference form "CHF Telehome Monitoring Referral-Telemedicine".
- ◆ Fax the reference form at 613-636-6201.
